

A close-up, high-angle photograph of a person's face, focusing on the right eye and dark hair. The eye is dark and looking slightly to the right. The hair is dark and appears to be styled or falling over the forehead. The skin is fair and has a soft texture. The background is a plain, light color.

ENVISION AESTHETICS
MEDICAL SPA

OUR CONCEPT OF FACIAL REJUVENATION

It is to return aged anatomy to its previously, youthful appearance. This is accomplished by a variety of methods to attain a “refreshed, unoperated” look.

All aesthetic plans are tailored to the individual using both surgical and non surgical methods. Non surgical methods such as Botox® injections, facial fillers, skin resurfacing and skin care products are often used as sole therapy or in conjunction with surgical modalities.

Today’s aesthetic surgery utilizes minimally invasive, small incision surgery to restore functional, anatomic units to their proper position. Traditional techniques such as Blepharoplasty (eye-lift) are augmented or at times replaced by Endoscopic Brow and Midface lifting. These small incision techniques have enhanced effectiveness with fewer complications and reduced post operative recovery time.

AESTHETIC PLANS

Photo-Rejuvenation

The light energy delivered by the BBL (Pulsed Light Laser) will gently heat up the upper layers of your skin. The heat absorbed by the targeted areas will stimulate your skin cells to generate new collagen. This will restore your to its natural beauty, blending its natural colors and making it smoother, vibrant and younger looking.

Laser Treatment Of Veins & Redness

Broken capillaries and other visible vascular structures will be gently eliminated from the visible layers of your skin's surface. Unwanted vessels will be preferentially heated by the laser's energy and become less noticeable. All skin can be treated; popular areas are the face, neck, chest and legs.

MicroLaser Peel

An intra-epidermal laser peel that precisely ablates the outermost layers of the skin. The procedure is individually tailored to the nature of the condition to be corrected. More than a Microdermabrasion or a light chemical peel, a Micro Laser Peel can treat such conditions as: wrinkles, scars, acne scars, keratosis, or pigmentary problems.

Laser Skin Peel

A deeper peel than the MicroLaser Peel, a Laser Skin Peel will remove thin layers of your skin's surface, which will be replaced by younger skin growth, the depth and effect of the laser will be tailored to match your skin condition and desired result. A Laser Skin Peel will soften your wrinkles making them less noticeable, some will disappear. Pigmented lesions will greatly improve.

Laser Skin Resurfacing

Laser skin resurfacing reduces wrinkles without scalpels or stitches. The laser emits an intense beam of energy that heats and vaporizes tissues instantaneously. It is so precise that the normal surrounding tissues are minimally affected. Lasers cause less scarring, bleeding and bruising and provide a level of control that is difficult to achieve with other treatments, in addition, lasers allow Dr. Moskowitz to immediately visualize the effect of the treatment

Microdermabrasion

Microdermabrasion: This procedure uses one of several methods, such as a rotating brush or a pressurized stream of fine particles to remove the top layers of the skin to treat scars and wrinkles, exposing an undamaged, smoother layer. There is little recovery time and you can resume normal activities immediately.

Chemical Peels

Chemical Peels: These materials facilitate resurfacing of the skin by causing gentle coagulation and removal of the outermost layers-allowing smoother and more supple skin to regenerate. This is an effective treatment for wrinkles caused by sun damage, mild scarring, and certain types of acne. The deeper the peel, the longer the recovery time, with an average of two weeks.

Scar Revision

The treatment of scar revision involves various modalities such as direct excision, steroid injections, occlusive dressings, and resurfacing. Each scar is different and requires individual tailoring. Many of these methods are office procedures with only severe cases requiring treatment in the operating room.

Blepharoplasty

Through modern techniques and advances in an eyelid rejuvenation procedure called Blepharoplasty, Dr. Moskowitz can help restore a more youthful, alert and healthy look to your eyes. Sometimes referred to as a "mini-face lift", Blepharoplasty has become one of our most popular aesthetic procedures for both men and women. Blepharoplasty can be performed on both the upper and lower eyelids.

Endoscopic Brow & Mid Face Lift

As we age, gravity and skin ligament laxity cause our Upper face and Midface to become inferiorly displaced. Using small incisions in the scalp, the eyelids and Endoscopic techniques, the Brow and Midface can be repositioned to minimize the extent of excisional surgery such as Blepharoplasty and Face lifts. These techniques have reduced complications and recovery times compared to older, traditional methods.

Botox® And Facial Injections

Botox®: Blocks impulses from the nerve to the tiny facial muscles that are related to expression lines. Botox® relaxes the muscles so they do not contract. After treatment, the overlying skin remains smooth and unwrinkled, while the untreated facial muscles contract in a normal fashion, allowing normal facial expression to be unaffected. There is no chance of scarring and you can resume all your activities immediately after treatment. Filler Injections: (Restylane®, Collagen, and Radiesse™) fills in lines, creases, and depressed scars. They can also be used to add fullness to the cheek area or lip. There is no downtime associated with this procedure and results last between six and twelve months.

Restylane®

Restylane® is a crystal-clear gel that may be used for filling out facial wrinkles, facial folds, and the lips. Restylane® contains hyaluronic acid, which is a natural substance already present in the skin. Once injected, it works together with the body's own hyaluronic acid and creates volume. The results can be seen immediately, with the majority of patients enjoying the effects longer than six months.

Radiesse™

A longer lasting method to reduce the appearance of facial lines and folds and attain fuller lips, Radiesse™ is the latest breakthrough to reduce facial wrinkles and to enhance thin or small lips. This injectable gel product offers longer lasting results than other methods currently being used. Radiesse™ will last for years, as opposed to months, and is shown to cause little to no allergic reactions or other side effects that may be elicited with other injectable methods. Although only FDA-approved for treating incontinence, the synthetic Radiesse™ can be legally used to treat deep wrinkles.

PRODUCTS

Obagi Nu-Derm System (Prescription Strength)

Speak with our skin care consultant to find out more about this amazing system, and how it may complement many of our treatments and procedures as well as be customized to fit your individual needs and goals.

This System penetrates below your skin's surface, transforming skin cell functions at the cellular level and correcting the damage within your skin. Administered using a specific sequence of dosage and frequency that's tailored for your skin's condition, the prescription-based System triggers a therapeutic cascade that makes your skin look and act younger and healthier.

G.M. Collin Dermo-Corrective Skin Care

An exclusive range of clinical treatments designed to target specific aesthetic skin problems and meet the most demanding expectations for tangible improvement.

SHARON BRATHWAITE

Sharon grew up on the Island of Barbados. In 1991, Sharon came to the United States to pursue her dream of being a Dental Lab Technician. However, she switched careers after realizing that the aesthetics and beauty industry was more gratifying on a personal and professional level, and complemented the path that she wanted to pursue in life. Sharon takes great pleasure from working one on one with a diverse clientele to achieve a desired outcome. She also does extensive work with cancer patients—a cause that is dear to her heart. Sharon applies a distinct technique and style that is meticulous and personable. To quote Sharon, “If you enjoy people and your work, then the job is never done until the client is completely satisfied.”

Sharon has been a Licensed Medical Aesthetician for over eight years. She received her initial training in Atlanta, Georgia and subsequent training in New York City, Grand Rapids, Michigan, and Barbados. She owned and operated a spa and cosmetic store in Barbados and was featured numerous times in the Barbados Nation Newspaper on topics that relates to skincare and makeup. Sharon has been affiliated with companies such as Chanel, Sothys, Pevonia, Red Door Spas, medical offices, and the prestigious Almond Beach Resorts in Barbados. At present, Sharon practices as a Medical Aesthetician, Specializing in Laser treatments and sun-damaged skin.

BRUCE K. MOSKOWITZ, M.D.

Dr. Moskowitz is a board certified Ophthalmologist who received his BA from Wesleyan University in 1983. In 1987 he received his M.D. from SUNY Downstate Medical School. Dr. Moskowitz then went on for continued post-doctoral training in Oculoplastic and Reconstructive Surgery at the New York Eye & Ear Infirmary where he maintains his private practice and is an active member of the Oculoplastic and Reconstructive Service. The Doctor is also active in the Ophthalmology and Otolaryngology training programs at the Infirmary. In addition, Dr. Moskowitz has lectured extensively here and abroad and is the author of numerous articles and book chapters. His practice encompasses all areas of Oculoplastic, Cosmetic and Reconstructive Surgery and he performs approximately 400

major cases and hundreds of office procedures each year in addition to the thousands of Botox® injections he has administered over the last 14 years. These cases range from cosmetic Endoscopic Brow lifting, Midface lifting and Blepharoplasties to Thyroid Decompression, Endoscopic DCR and post-Mohs reconstruction of the peri-orbital area and face. Office procedures include eyelid surgery, chemical peels, Botox® and the full range of facial injectable fillers.

If you are interested in eyelid or facial rejuvenation, consider consulting with the Doctor.

*Consultations by appointment only
